Cell Biology (CB), a journal of experimental cell investigation, publishes reviews, original articles and short communications on the structure, function and macromolecular organization of cells and cell components. Contributions focusing on cellular dynamics, motility and differentiation, particularly if related to cellular biochemistry, molecular biology, immunology, neurobiology, and developmental biology are encouraged.

This book is an introduction to cell biology, and is designed primarily for undergraduate students. It is not, however, an elementary book, and presupposes knowledge of biology up to High School level. The inclusion of greater detail than is usually found in texts of undergraduate level is deliberate.

Cellular compartments and organelles organize biological matter. Most well-known organelles are separated by a membrane boundary from their surrounding milieu. There are also many so-called membraneless organelles and recent studies suggest that these organelles, which are supramolecular assemblies of proteins and RNA molecules, form via protein phase separation. Recent discoveries have shed ...

The Cell Biology Program at SKI is focused on understanding the molecular mechanisms that control normal cell behavior and how these are disrupted in cancer. Our mission is to identify, through the advancement of knowledge in cell biology, alterations that promote cancer progression and new opportunities for treating the disease.
