Beaglebone Linux

If your Beagle includes WiFi, an access point called "BeagleBone-XXXX" where "XXXX" varies between boards. The access point password defaults to "BeagleBone". Your Beagle should be running a DHCP server that will provide your computer with an IP address in the 192.168.8.x range and reserve 192.168.8.1 for itself.

Getting Started

With Beaglebone

BeagleBone is a small, low(ish) cost, open-source Linux computer on a board - using an ARM Cortex-A8 processor running at 720 MHz, with 256 MB of RAM. Unlike an Arduino - this is a fully-fledged computer. This makes it extremely powerful - and makes it a nice device to play with, to learn about embedded Linux.
