rupture properties of a cobalt-base alloy (S-816) and II nickel-base alloy (Inconel 550) were investigated at 1500' F. The range of mean stress was from 15 000 to 40 000 psi. Life in vacuum was generally greater than life in air for both alloys in both fatigue and stress rupture. This improvement was fairly constant over the entire stress range

Il y a 2 types de rupture : fragile (la rupture est brutale) et ductile (la rupture est lente et implique de grandes déformations). L'essai de dureté sert à estimer la limite d'élasticité c'est-à-dire la résistance qu'oppose le matériau à la pénétration d'un autre corps plus dur que lui.

Introduction. Loey's-Dietz syndrome (LDS) has recently been recognized as a connective tissue disorder, caused by heterozygous mutations in the transforming growth factor-β genes, TGFBR1 and TGFBR2, and characterized by aggressive aortic aneurysm and dissection [].Although affected patients are at high risk of aortic dissection or rupture at an early age, there are few reports of ...

If a rupture disc type has a burst tolerance of +/-10%, and the defined burst pressure is 1 bar, the rupture disc will open between 900 mbar and 1.1 bar. Depending on the valid or applied rules and regulations the burst tolerance is at +/-10% (e.g. Pressure Equipment Directive 2014/68/EC), or +/-5% (e.g. ASME section VIII, Division 1), or +/-3% ...

1. Introduction. The risk of humanity's possible extinction could take various forms, from diseases to runaway climate change to asteroid strikes. It is widely agreed that either extinction or global catastrophic risks leading to most humans dying would be bad, even if the exact relative importance of avoiding extinction is unclear.
