structure modeling and visual appearance modeling. The proposed model addresses this two issues through one unified approach in an end-to-end fashion. To handle the structural diversity and uncertainty, it designs a stochastic grammar based on the probabilistic And-Or graph to model the structural composition.

For a given  $j=1,2,\dots,p$ , a model is built according to the data record. Then the model is used for prediction of future data. Consequentially, this kind of modeling method often results in failure of unit-sum constraint, The reason causing the failure is that the DoF of a  $p$  dimensional vector of compositional data is only  $p-1$ . When
